

### Sample Calculation (a rate per 1000 livebirths)

Performance Rate =  $\frac{\text{Numerator (a = 10 patients)}}{\text{Denominator (b=1000 patients) - Denominator Exclusions (c=10 patients)}} \times 1000 = 10.1 \text{ per thousand livebirths}$

Stratification 1 =  $\frac{\text{Numerator (a1 = 3 patients)}}{\text{Denominator (b=1000 patients) - Denominator Exclusions (c=10 patients)}} \times 1000 = 3.0 \text{ per thousand livebirths}$

Stratification 2 =  $\frac{\text{Numerator (a2 = 7 patients)}}{\text{Denominator (b=1000 patients) - Denominator Exclusions (c=10 patients)}} \times 1000 = 7.1 \text{ per thousand livebirths}$
